Travia Subscription Architecture & Launch Strategy

A simple, conversion-optimized monetization roadmap tailored for a high-growth travel, ride-sharing, and parcel marketplace startup. Designed to maximize user adoption, protect app store compliance, and convert casual riders into paying subscribers.

✓ Zero Friction Onboarding ✓ ₹29 Daily Impulse Pass ✓ Play Store & App Store Compliant

1. The Startup Challenge & The Solution: The "Impulse Pass"

Why standard ₹299/month subscriptions fail for early-stage startups:
Users who download Travia for the first time don't know if they will travel again this month. Asking them for **₹299 immediately creates high friction and causes 90%+ drop-off.**

The Winning Solution: Introduce a **₹29 or ₹49 "24-Hour Day Pass"**. When a user is in a hurry and needs to contact a driver or post an urgent parcel right now, paying ₹29 is an effortless, instant decision. Once they experience the quality of Travia, they gladly upgrade to the Monthly or 3-Month VIP Pass!

2. Recommended 3-Tier Plan Portfolio

HOT IMPULSE PASS

24-Hour Day Pass

For urgent, one-time riders or parcel senders.

₹29 / 24 Hours

- Direct Driver Phone & Call Masking
- Instant booking confirmation
- Zero booking commission today
- Send 1 urgent parcel / ride

Result: High volume, zero buyer hesitation!

1 Month Frequent Pass

For weekly commuters & active travelers.

₹199 / 30 Days

- Everything in Day Pass
- Unlimited ride bookings
- Full luggage & parcel marketplace
- Blue Trust Profile Badge
- Zero cancellation penalty fees

Great value: ₹6.6/day cost

BEST VALUE (40% OFF)

3 Months VIP Pass

For regular commuters, drivers & sellers.

₹499 / 90 Days

- All VIP Features included
- Priority 24/7 dedicated support
- Top search placement in marketplace
- Golden VIP Profile Badge
- Maximum driver & passenger trust

Highest Margin & Customer Lifetime Value

3. Feature Restriction Matrix: Free vs Paid

Golden Rule for Startups: Never block users from downloading, browsing, or searching. Let them find value first, then prompt payment at the exact moment of high intent.

App Feature	Free User (No Plan)	24-Hr Pass (₹29)	Monthly / VIP Pass
Search & Explore Rides Browsing available routes & schedules	Unlimited	Unlimited	Unlimited
Direct Driver Call / Phone Click to call or view direct contact	Locked (Blurred)	Active (24 Hrs)	Active (Full Period)
Ride Booking / Confirmation Confirm seat & send ride request	1 Free Trial Ride	Unlimited Today	Unlimited Always
Marketplace & Parcel Delivery Send parcels / list luggage space	View Only	1 Parcel Post	Unlimited Posts
Verified Trust Badge Green tick on profile for safety	No Badge	No Badge	VIP Badge Active
Cancellation Fees Penalty protection for unexpected delays	Standard Fees Apply	Waived	Zero Fee Protection

4. The Frictionless 4-Step User Journey (No Annoyance)

1. **Free Discovery**
   User opens Travia, enters pickup & destination, views matching rides and driver reviews with zero paywall.
2. **High-Intent Action**
   User taps **"Direct Call Driver"** or **"Confirm Instant Booking"**.
3. **Gentle Bottom Sheet**
   Instead of a harsh blocker, a sleek bottom sheet appears: *"Unlock driver contact now for only ₹29, or save with VIP Pass."*
4. **1-Click Payment**
   User pays via UPI/Razorpay or Apple In-App Purchase in 5 seconds and is immediately returned to call the driver!

Why this flow guarantees client satisfaction:
It respects the user. The customer never feels cheated or forced; they gladly pay ₹29 because they already see their driver waiting and want immediate safety and contact.

5. Critical Store Compliance: Razorpay vs Apple In-App Purchase

CRITICAL APP STORE / PLAY STORE GUIDELINE (Must Read for Client):

Apple App Store (iOS): Apple Guideline 3.1.1 strictly mandates that any digital unlock (VIP badge, direct calling feature, ad-free, or app subscription) on iPhone **MUST USE APPLE IN-APP PURCHASE**. If you use Razorpay on iOS for app features, Apple will reject the app during review.

Google Play Store (Android): You can use Razorpay for rides and logistics. However, for digital in-app passes, Google Play Billing or Razorpay with appropriate category billing can be configured.

The Recommended Setup:

- **Android:** Razorpay SDK (Supports UPI, Google Pay, PhonePe, Paytm, Cards) — Lowest transaction fees (~2%).
- **iOS:** StoreKit In-App Purchase (or RevenueCat wrapper) — 100% compliant with Apple rules.

6. Technical Implementation: Clean Firebase Data Model

```
// In Firestore 'users' collection: { "uid": "USER_ID_123", "is_premium": true, // Master boolean "subscription_tier": "24_hour_pass", // "24_hour_pass" | "monthly_pass" | "vip_3m" "subscription_expires_at": Timestamp, // Expiry datetime "payment_provider": "razorpay", // "razorpay" (Android) or "apple_iap" (iOS) "free_rides_used": 1 // Tracks free trial quota } // In Flutter Helper (Zero Lag, Instant Check): bool isPlanActive(DocumentSnapshot userDoc) { final expiresAt = userDoc.get('subscription_expires_at')?.toDate(); if (expiresAt == null) return false; return DateTime.now().isBefore(expiresAt); }
```

7. Word-for-Word Pitch Script to Explain to the Client

Point 1: The Micro-Pass Concept

"Sir, most travel apps lose users because they demand ₹300 upfront. For Travia, we are introducing a ₹29 Day Pass. Any user in an emergency will pay ₹29 without a second thought. This builds trust, generates immediate cash flow, and creates our paying customer base from day one."

Point 2: What We Lock vs What is Free

"We keep search, exploration, and route browsing 100% free so people fall in love with the app. We only gate the high-value features: Direct Driver Calling, Parcel Delivery, and Zero-Cancellation VIP protection. When they hit that button, they see the ₹29 option and pay happily."

Point 3: Payment Compliance (Android vs iOS)

"On Android, we give users full UPI, Paytm, and PhonePe options via Razorpay for instant 2-second payments. On iOS, we follow Apple's strict In-App Purchase protocol so our app gets approved smoothly without any store rejection."
